

SARILAR GROUP SDG 13 CLIMATE ACTION

At Sarilar Group, we are aware of the climate crisis and evaluate our operations to contribute to the fight against climate change. In this context, we are reviewing our activities and implementing innovation-based services in line with the following measures:

Green Energy Use

We have initiated efforts to use energy from renewable sources in our operations. Feasibility studies are underway for solar panel installations at our headquarters to generate renewable energy. Our goal is to become a company that produces its own electricity at our headquarters and branches by 2026.

Efficiency and Conservation

We continuously strive to optimize the use of energy and resources. Efforts are being made to use cranes and other equipment more efficiently, adopt energy-saving technologies, and reduce waste.

Reduction of Carbon Dioxide Emissions

We are conducting research on more environmentally friendly equipment, such as electric or hybrid cranes, to reduce emissions. Efforts to convert our service and passenger vehicles to electric models will begin in 2026.

Protection of Natural Resources

We take care to preserve natural habitats and ecosystems during our operations. We are committed to minimizing habitat loss by protecting vegetation in construction areas.

Education and Awareness Programs

We aim to raise awareness and help reduce environmental impacts by educating our employees, suppliers, and customers on climate change.

Sustainable Supply Chain Management

We collaborate with all stakeholders in our supply chain to adopt sustainability standards and promote the use of sustainable products and services. We aim to source the majority of our office and field supplies from recycled materials.

In relation to climate governance, we ensure full compliance with legal regulations and industry standards related to climate change. As of 2023, we began measuring Sarilar Group's direct and indirect greenhouse gas emissions based on the 'IPCC 2006 Guidelines' and 'GHG Protocol Corporate Accounting and Reporting Standard' (Scope 1, Scope 2, and Scope 3). We aim to enhance our processes by incorporating Scope 3 emissions into our future emission calculations.

For the period between January 1, 2024, and December 31, 2024, we assessed the inventory of Scope 1 and Scope 2 greenhouse gas emissions resulting from our activities and reached the following carbon emission results:

Table 1. Carbon Footprint Results

Carbon Footprint (t-CO ₂ e)	Direct (Scope 1)	Indirect (Scope 2)	Total
	955.2	59.9	1015.0

Carbon Footprint 2023

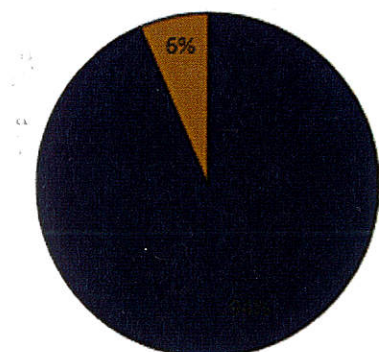

Table 3. Carbon Footprint Breakdown

Carbon Footprint Distribution		
Scope 1 Emissions		
Emission Type	Emission Amount (t-CO ₂ e)	Percent
Constant Combustion	12,339	1,2 %
Mobile Resources	941,781	92,8 %
Refrigeration/Air Conditioning Equipment Use	1,061	0,1 %
Fire Fighting	0,004	0,0003 %
Purchased Gases	-	-
Scope 2 Emissions		
Emission Type	Emission Amount (t-CO ₂ e)	Percent

Purchased and Consumed Electricity	59,862	5,90 %
Purchased and Consumed Steam	-	-
Sum	1015,047	100 %
